I am a PhD candidate (advisor: [Jose C. Principe](#)) at the [Computational NeuroEngineering Lab](#) (University of Florida) seeking full-time research roles in machine learning with a preference towards areas related to physics inspired AI, uncertainty in AI, safety/interpretability of AI, anomaly detection and time series analysis.

## EDUCATION

<b>Doctor of Philosophy in Electrical and Computer Engineering</b> (GPA: 3.71/4) <i>University of Florida</i> <i>Research Areas:</i> Kernel Methods, Information Theory, Uncertainty Quantification, Machine Learning.	<b>May 2018 - 2022 (exp.)</b> Gainesville, USA
<b>Master of Science in Electrical and Computer Engineering</b> (GPA: 3.71/4) <i>University of Florida</i> <i>College of Engineering Achievement Award for New Engineering Graduate Students (May 2016 — May 2017)</i> <i>Coursework:</i> Deep Learning, Big Data Ecosystems, Machine Learning for Time Series, Pattern Recognition, Noise in Linear Systems, Image Processing and Computer Vision, Quantum Information Science.	<b>Aug 2016 - May 2018</b> Gainesville, USA
<b>Bachelor of Science in Electrical and Electronics Engineering</b> (GPA: 8.46/10) <i>Vellore Institute of Technology</i>	<b>Aug 2010 - May 2014</b> Vellore, India

## RESEARCH EXPERIENCE

<b>University of Florida</b> <b><i>Computational NeuroEngineering Lab (CNEL): PhD Candidate and Research Assistant</i></b>	<b>Aug 2017 — Present</b> Gainesville, USA
<ul style="list-style-type: none"><li>Developed and formulated a <i>physics inspired multi-moment uncertainty decomposition framework</i> (capable of single-shot estimation of uncertainty) for data and deep learning models by leveraging functional operators in the RKHS (reproducing kernel Hilbert space).</li><li>Elucidated, both theoretically and through rigorous comparative analysis, many practical advantages of the framework over conventional iterative uncertainty quantification techniques like approximate <i>Bayesian and ensemble approaches</i> for both classification and regression problems on benchmark datasets.</li><li>Applied the uncertainty framework for predictive <i>uncertainty quantification</i> of neural network models under test-set <i>data distributional shifts</i> (Models: LeNet, ResNet, VGG. Datasets: MNIST, K-MNIST, CIFAR-10).</li><li>Applied the uncertainty framework for uncertainty quantification of <i>semantic segmentation networks</i> (Models: Segnet, FCN-8, PSP, U-NET. Datasets: CamVid, Cityscapes (ongoing)) and for quantifying <i>transfer learning uncertainty</i> between learning models.</li><li>Currently testing the framework for applications such as <i>adversarial attack detection</i> in neural networks, <i>time-series clustering and anomaly detection</i>.</li><li>Developed Hierarchical Linear Dynamical System (HLDS) architectures for video game <i>action sequence segmentation</i> (DARPA project), <i>dynamic texture synthesis</i> and <i>speech phoneme recognition</i>.</li><li>Implemented a deep CNN using <i>tensorflow</i> to construct photo-realistic versions of human face sketches (CELEB-A database).</li></ul>	
<b>AventuSoft LLC</b> <b><i>Research Scientist Intern</i></b>	<b>May 2020 — Aug 2020</b> Boca Raton, USA
<ul style="list-style-type: none"><li>AventuSoft LLC is a research startup that develops medical devices for high-value cardiac assessments by <i>analyzing heart valve movements</i>.</li><li>I worked with the <i>HEMOTAG</i> device (<a href="#">link</a>), the flagship product of AventuSoft for diagnosing and managing heart failure assessments.</li><li>Implemented <i>deep learning algorithms for detecting fiducial points in Electrocardiography (ECG)</i> time-series data as part of a downstream task of arrhythmia detection. The work was incorporated into the HEMOTAG product.</li><li>Tested and validated algorithm's performance on benchmark ECG datasets such as MIT-DB, European ST-T and PhysioNet.</li><li>Collaborated with the research team to learn more about the HEMOTAG platform and discussed and suggested future research work to improve the technology further.</li><li>Participated in regular meetings with the hardware, marketing and management groups to understand practicalities related to product launch and ways to integrate research work with the product.</li></ul>	
<b>Vellore Institute of Technology</b> <b><i>Undergraduate Researcher</i></b>	<b>Jan 2013 — May 2014</b> Vellore, India
<ul style="list-style-type: none"><li>Collaborated with a <i>team of 40 members (Team Ojas)</i> to build an electric car for <i>Formula Student (FS)</i> competition, UK (July, 2013). Worked specifically with high voltage electrical systems of the vehicle. Collaborated with the mechanical engineering team to research appropriate motor ratings, type of motors, battery power and management system required to achieve target vehicle performance levels.</li><li>Performed a comparative analysis of induction motor <i>dynamic braking</i> schemes using <i>MATLAB and Simulink</i> as part of an independent research work with a course professor. Work resulted in a publication (<a href="#">paper link</a>).</li><li>Performed simulations to demonstrate a novel rotor position estimation technique for switched reluctance motors where the vibration pulses being sensed on the stator frame were used as signatures to determine the rotor position (senior year project). Work resulted in a publication (<a href="#">paper link</a>).</li></ul>

## TALKS

- **Invited Talk:** A Functional Operator for Model Uncertainty Quantification in the Reproducing Kernel Hilbert Space: *Machine Learning Group, UIT Arctic University of Norway.*
- **Contributed Talk:** A Quantum Theory Inspired Framework for Uncertainty Quantification: *IEEE International Conference on Data Science and Advanced Analytics (DSAA).* Speaker: Jose C. Principe (Distinguished Professor, University of Florida).
- **Contributed Talk:** Making Deep Neural Networks Transparent by Information Theory: *Presentation at Microsoft.* Speaker: Shujian Yu (Associate Professor, UIT Arctic University of Norway).
- **Conference Presentation:** Time Series Analysis using a Kernel based Uncertainty Decomposition Framework: *Conference on Uncertainty in Artificial Intelligence (UAI) 2020.*
- **Conference Presentation:** Composite Dynamic Texture Synthesis Using Hierarchical Linear Dynamical System: *International Conference on Acoustics, Speech and Signal Processing (ICASSP) 2020.*
